Ovideon, Inc. presents an extensive and versatile line up of High Definition Professional LCD Displays specifically designed for dynamic messaging and entertainment applications. With stylish design, latest technology, reliability and overall value these displays are a sure fit for your next installation.

Aurora, Ill., May 16, 2007— Today, Ovideon Inc., as a response to the growing demand for versatile and reliable digital signage flat screen displays, is proud to introduce the Ovideon LCS Series High Definition Professional LCD Monitors designed for public display, digital signage, financial, broadcast, entertainment, religious, board room, conference room, teleconferencing, military and transportation applications. These monitors are built specifically for the rigors of harsh commercial and industrial environments as well as extended 24/7 operation applications.

Innovative, performance enhancing, technologies are at the heart of every Ovideon Professional LCD display. By implementing technologies such as, angel filtering to reduce picture noise, video/film cadence correction for enhanced video playback, enhanced brightness (up to 500cd/m²) for easy viewing in most any environment, variable back light adjustment, automatic ambient light compensation, variable black level adjustment, gamma correction, progressive scan for the ultimate in picture clarity and fast, industry leading, **6.5ms** response time for crisp video during fast action sequences, the Ovideon Pro LCS LCD displays is a fitting solution for most any commercial project .

Every Ovideon Pro LCD display is designed with reliability in mind. By implementing extensive quality control elements in the design and manufacture of its displays Ovideon is targeting the ultimate in product longevity and customer satisfaction.
